EDUCATION

Computer Science
Misr international university

08/2022 – 08/2026
Cairo, Egypt

PROFILE

Passionate and A Computer Science student at Misr International University with hands-on experience in full-stack development and system design. Founder of Neo, a growing clothing brand. Eager to contribute technical and entrepreneurial expertise to dynamic software engineering teams.

SKILLS

Programming Languages:

- Java, C++, JavaScript, C#, Python, PHP, Spring Boot, dart, HTML, CSS

Frameworks & Plarforms

- Spring Boot, Django, Flutter

Databases:

- SQL, MySQL, MongoDB, SQL Server

Tools & Platforms:

- Git, Linux/Unix, Github, Supabase, Google Firebase, Figma

Concepts:

- Data Structures & Algorithms, OOP, Network Protocols

Soft Skills:

- Teamwork, Communication, Adaptability, Fast Learner

EXPERIENCE

IT Trainee

07/2025

EgyptAir Training Academy – EgyptAir Maintenance & Technical Works

- Completed practical training in the General Administration of Systems & Information.
- Gained hands-on experience in IT operations and technical support within an aviation enterprise environment.
- Assisted in system monitoring, troubleshooting, and internal technical processes.
- Learned how enterprise-level information systems support aviation maintenance operations.

CERTIFICATES

- Code Generation and Optimization Using IBM Granite 
- Artificial Intelligence Fundamentals 

PROJECTS

COVADEV | Graduation Project

Tech Stack: Python, Django, React, TypeScript, NLP

AI-driven system validating semantic alignment between BPMN process models and source code using fine-tuned transformer embeddings, with Precision, Recall, and F1-score metrics and a React dashboard.

Student Portal System

Tech Stack: C++, Windows Forms

- Engineered a portal system for students to view their schedules and personal academic information.
- Developed administrative tools for managing and updating class schedules.
- Applied object-oriented programming principles for modular and maintainable code.

Library Management System

Tech Stack: Java, JavaFX

- Built a desktop application to manage a digital library catalog, allowing users to browse categories and add books to a cart for checkout.
- Designed admin features for book inventory control, including adding/removing entries.
- Leveraged JavaFX for an interactive and user-friendly graphical interface.

Full Stack E-Commerce Website

Tech Stack: HTML, CSS, JavaScript, Node.js, MongoDB

- Built a full-stack e-commerce platform for a clothing brand with secure user authentication, product browsing, shopping cart, and payment processing.
- Designed a clean and intuitive user interface to enhance customer experience.
- Managed front-end and back-end integration, including database operations and dynamic content.

Real Estate Website

Tech Stack: PHP, SQL, HTML, CSS

- Developed a dynamic web platform for property buying, renting, and listing.
- Implemented filtering functionality based on property type and price to enhance user experience.
- Enabled users to list properties with detailed information and images.
- Integrated a secure contact form allowing potential buyers/renters to directly reach out to listers.
- Built SQL-based backend to manage user listings, queries, and data storage.

Resource and Time Management Platform

Tech Stack: HTML, CSS, Spring Boot

- Developed a full-stack platform to manage team resources and time efficiently, featuring task assignment based on real-time workload analysis.
- Implemented a time tracking system with a real-time dashboard to monitor productivity and task progress.
- Designed a dynamic and responsive user interface, including a real-time updating navigation bar for improved usability.
- Handled front-end and back-end integration, ensuring seamless data flow and task management using Spring Boot.

Pawtopia -Pet Adoption and Rescue mobile app | Flutter

Tech Stack: Flutter (Dart), Riverpod, Firebase, AI-assisted image matching

- Designed and implemented a cross-platform Flutter application connecting adopters, shelters, and admins through a unified platform.
- Built a clean architecture (data, domain, presentation layers) with Riverpod for scalable and maintainable state management.
- Integrated Firebase Authentication, Firestore, Cloud Storage, and FCM to support secure login, real-time data, media uploads, and push notifications.
- Implemented full CRUD workflows for pet management, adoption requests, favorites, and user profiles.
- Developed real-time chat functionality and notification-driven user interactions.
- Integrated an AI-assisted missing pet matching feature to enhance rescue and recovery workflows.
- Applied role-based access control for users, shelters, and administrators.
- Collaborated in a team-based development process, following modular architecture and parallel feature development.
